

4. ICT/Computing Skills

In the digital age, proficiency in Information and Communication Technology (ICT) is indispensable. The institution offers comprehensive training in ICT and computing skills to ensure students are technologically adept. Courses on basic computing, C-programming, data analysis, and digital literacy are provided, equipping students with the necessary tools to thrive in a technology-driven world. Hands-on workshops on software applications, cyber security, and digital communication platforms enable students to utilize technology effectively and securely. By fostering digital competence, these programs prepare students for the evolving demands of the modern workplace.
